Using DDL Statements to Create and Manage Tables

Objectives

- After completing this lesson, you should be able to do the following:
 - Categorize the main database objects
 - Review the table structure
 - List the data types that are available for columns
 - Create a simple table
 - Understand how constraints are created at the time of table creation
 - Describe how schema objects work

Database Objects

Object	Description
Table	Basic unit of storage; composed of rows
View	Logically represents subsets of data from one or more tables
Sequence	Generates numeric values
Index	Improves the performance of some queries
Synonym	Gives alternative names to objects

Naming Rules

- Table names and column names:
 - Must begin with a letter
 - Must be 1–30 characters long
 - Must contain only A–Z, a–z, 0–9, _, \$, and #
 - Must not duplicate the name of another object owned by the same user
 - Must not be an Oracle server reserved word

CREATE TABLE Statement

- You must have:
 - CREATE TABLE privilege
 - A storage area

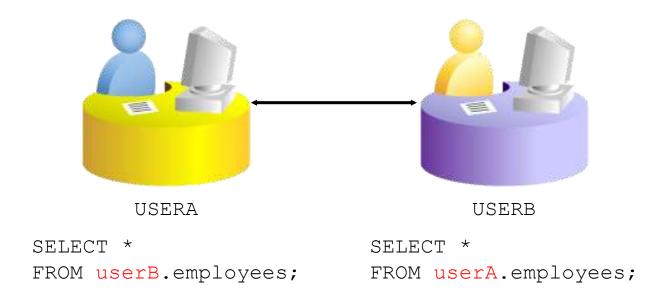

```
CREATE TABLE [schema.]table (column datatype [DEFAULT expr][, ...]);
```

- You specify:
 - Table name
 - Column name, column data type, and column size

Referencing Another User's Tables

- Tables belonging to other users are not in the user's schema.
- You should use the owner's name as a prefix to those tables.

DEFAULT Option

Specify a default value for a column during an insert.

```
... hire_date DATE DEFAULT SYSDATE, ...
```

- Literal values, expressions, or SQL functions are legal values.
- Another column's name or a pseudocolumn are illegal values.
- The default data type must match the column data type.

```
CREATE TABLE hire_dates

(id NUMBER(8),

hire_date DATE DEFAULT SYSDATE);

Table created.
```

Creating Tables

Create the table.

```
CREATE TABLE dept

(deptno NUMBER(2),

dname VARCHAR2(14),

loc VARCHAR2(13),

create_date DATE DEFAULT SYSDATE);

Table created.
```

Confirm table creation.

```
DESCRIBE dept -- not SQL statement
```

Name	Null?	Туре
DEPTNO		NUMBER(2)
DNAME		VARCHAR2(14)
LOC		VARCHAR2(13)
CREATE_DATE		DATE

Data Types

Data Type	Description
VARCHAR2(size)	Variable-length character data
CHAR(size)	Fixed-length character data
NUMBER (p,s)	Variable-length numeric data
DATE	Date and time values
LONG	Variable-length character data (up to 2 GB)
CLOB	Character data (up to 4 GB)
RAW and LONG RAW	Raw binary data
BLOB	Binary data (up to 4 GB)
BFILE	Binary data stored in an external file (up to 4 GB)
ROWID	A base-64 number system representing the unique address of a row in its table

Datetime Data Types

You can use several datetime data types:

Data Type	Description
TIMESTAMP	Date with fractional seconds
INTERVAL YEAR TO MONTH	Stored as an interval of years and months
INTERVAL DAY TO SECOND	Stored as an interval of days, hours, minutes, and seconds

Datetime Data Types

- The TIMESTAMP data type is an extension of the DATE data type.
- It stores the year, month, and day of the DATE data type plus hour, minute, and second values as well as the fractional second value.
- You can optionally specify the time zone.

```
TIMESTAMP[(fractional_seconds_precision)]
TIMESTAMP[(fractional_seconds_precision)]
WITH TIME ZONE

TIMESTAMP[(fractional_seconds_precision)]
WITH LOCAL TIME ZONE
```

Datetime Data Types

— The INTERVAL YEAR TO MONTH data type stores a period of time using the YEAR and MONTH datetime fields:

```
INTERVAL YEAR [(year_precision)] TO MONTH
```

– The INTERVAL DAY TO SECOND data type stores a period of time in terms of days, hours, minutes, and seconds:

```
INTERVAL DAY [(day_precision)]
TO SECOND [(fractional_seconds_precision)]
```

Including Constraints

- Constraints enforce rules at the table level.
- Constraints prevent the deletion of a table if there are dependencies.
- The following constraint types are valid:
 - NOT NULL
 - UNIQUE
 - PRIMARY KEY
 - FOREIGN KEY
 - CHECK

Constraint Guidelines

- You can name a constraint, or the Oracle server generates a name by using the SYS Cn format.
- Create a constraint at either of the following times:
 - At the same time as the table is created
 - After the table has been created
- Define a constraint at the column or table level.
- View a constraint in the data dictionary.

Defining Constraints

– Syntax:

— Column-level constraint:

```
column [CONSTRAINT constraint_name] constraint_type,
```

— Table-level constraint:

```
column,...
[CONSTRAINT constraint_name] constraint_type
  (column, ...),
```

Defining Constraints

— Column-level constraint:

— Table-level constraint:

```
CREATE TABLE employees(
employee_id NUMBER(6),
first_name VARCHAR2(20),

...
job_id VARCHAR2(10) NOT NULL,

CONSTRAINT emp_emp_id_pk
PRIMARY KEY (EMPLOYEE_ID));
```

NOT NULL Constraint

Ensures that null values are not permitted for the column:

LAST_NAME	EMAIL	PHONE_NUMBER	HIRE_DATE	JOB_ID	SALARY	DEPARTMENT_ID
King	SKING	515.123.4567	17-JUN-87	AD_PRES	24000	90
Kochhar	NKOCHHAR	515.123.4568	21-SEP-89	AD_VP	17000	90
De Haan	LDEHAAN	515.123.4569	13-JAN-93	AD_VP	17000	90
Hunold	AHUNOLD	590.423.4567	03-JAN-90	IT_PROG	9000	60
Ernst	BERNST	590.423.4568	21-MAY-91	IT_PROG	6000	60
Grant	KGRANT	011.44.1644.429263	24-MAY-99	SA_REP	7000	
Whalen	JWHALEN	515.123.4444	17-SEP-87	AD_ASST	4400	10
	King Kochhar De Haan Hunold Ernst Grant	King SKING Kochhar NKOCHHAR De Haan LDEHAAN Hunold AHUNOLD Ernst BERNST Grant KGRANT	King SKING 515.123.4567 Kochhar NKOCHHAR 515.123.4568 De Haan LDEHAAN 515.123.4569 Hunold AHUNOLD 590.423.4567 Ernst BERNST 590.423.4568 Grant KGRANT 011.44.1644.429263	King SKING 515.123.4567 17-JUN-87 Kochhar NKOCHHAR 515.123.4568 21-SEP-89 De Haan LDEHAAN 515.123.4569 13-JAN-93 Hunold AHUNOLD 590.423.4567 03-JAN-90 Ernst BERNST 590.423.4568 21-MAY-91 Grant KGRANT 011.44.1644.429263 24-MAY-99	King SKING 515.123.4567 17-JUN-87 AD_PRES Kochhar NKOCHHAR 515.123.4568 21-SEP-89 AD_VP De Haan LDEHAAN 515.123.4569 13-JAN-93 AD_VP Hunold AHUNOLD 590.423.4567 03-JAN-90 IT_PROG Ernst BERNST 590.423.4568 21-MAY-91 IT_PROG Grant KGRANT 011.44.1644.429263 24-MAY-99 SA_REP	King SKING 515.123.4567 17-JUN-87 AD_PRES 24000 Kochhar NKOCHHAR 515.123.4568 21-SEP-89 AD_VP 17000 De Haan LDEHAAN 515.123.4569 13-JAN-93 AD_VP 17000 Hunold AHUNOLD 590.423.4567 03-JAN-90 IT_PROG 9000 Ernst BERNST 590.423.4568 21-MAY-91 IT_PROG 6000 Grant KGRANT 011.44.1644.429263 24-MAY-99 SA_REP 7000

20 rows selected.

NOT NULL constraint (No row can contain a null value for this column.)

NOT NULL constraint

Absence of NOT NULL constraint (Any row can contain a null value for this column.)

UNIQUE Constraint

EMPLOYEES

UNIQUE	constraint

EMPLOYEE_ID	LAST_NAME	EMAIL
100	King	SKING
101	Kochhar	NKOCHHAR
102	De Haan	LDEHAAN
103	Hunold	AHUNOLD
104	Ernst	BERNST

. . .

208	Smith	JSMITH	← Allowed
209	Smith	JSMITH	── Not allowed:
			already exists

UNIQUE Constraint

Defined at either the table level or the column level:

PRIMARY KEY Constraint

DEPARTMENTS

DEPARTMENT_ID	DEPARTMENT_NAME	MANAGER_ID	LOCATION_ID
10	Administration	200	1700
20	Marketing	201	1800
50	Shipping	124	1500
60	IT	103	1400
80	Sales	149	2500

. . .

Not allowed (null value)

Public Accounting		1400
50 Finance	124	1500

Not allowed (50 already exists)

FOREIGN KEY Constraint

DEPARTMENTS

	DEPA	ARTMENT_ID	DEPAR	TMENT_NAME	MANAGER_ID	LOCATION_ID
		10	Administration	ı	200	1700
		20	Marketing		201	1800
		50	Shipping		124	1500
PRIMARY		60	IT		103	1400
KEY		80	Sales		149	2500
EMPLOYEES					1	
EMPLOYEE_ID		LAST_NA	\ME	DEPARTI	_	FOREIGN
		King			90	KEY
		Kochhar			90	
		De Haan			90	
		Hunold			60	
		Ernst			60	
	107	Lorentz			60	Not allowed
			1 INS	SERT INTO		(9 does not exist)
		Ford			9	
	201	Ford			60	← Allowed

FOREIGN KEY Constraint

Defined at either the table level or the column level:

```
CREATE TABLE employees (
   employee id NUMBER(6),
   last name VARCHAR2(25) NOT NULL,
   email
                 VARCHAR2 (25),
   salary NUMBER (8, 2),
   commission pct NUMBER(2,2),
   hire date DATE NOT NULL,
   department id NUMBER(4),
   CONSTRAINT emp dept fk FOREIGN KEY (department id)
     REFERENCES departments (department id),
   CONSTRAINT emp email uk UNIQUE (email));
```

FOREIGN KEY Constraint: Keywords

- FOREIGN KEY: Defines the column in the child table at the table-constraint level
- REFERENCES: Identifies the table and column in the parent table
- ON DELETE CASCADE: Deletes the dependent rows in the child table when a row in the parent table is deleted
- ON DELETE SET NULL: Converts dependent foreign key values to null

CHECK Constraint

- Defines a condition that each row must satisfy
- The following expressions are not allowed:
 - References to CURRVAL, NEXTVAL, LEVEL, and ROWNUM pseudocolumns
 - Calls to SYSDATE, UID, USER, and USERENV functions
 - Queries that refer to other values in other rows

```
..., salary NUMBER(2)
CONSTRAINT emp_salary_min
CHECK (salary > 0),...
```

CREATE TABLE: Example

```
CREATE TABLE employees
   ( employee id NUMBER(6)
      CONSTRAINT emp employee id PRIMARY KEY
   , first name VARCHAR2(20)
   , last_name VARCHAR2(25)
      CONSTRAINT emp_last_name_nn NOT NULL
   , email VARCHAR2(25)
      CONSTRAINT emp email nn NOT NULL
      CONSTRAINT emp email uk UNIQUE
   , phone number VARCHAR2(20)
   , hire date DATE
      CONSTRAINT emp_hire_date_nn NOT NULL
   , job id VARCHAR2(10)
      CONSTRAINT emp job nn NOT NULL
   , salary NUMBER(8,2)
      CONSTRAINT emp salary ck CHECK (salary>0)
   , commission pct NUMBER(2,2)
   , manager id NUMBER(6)
   , department id NUMBER(4)
      CONSTRAINT emp dept fk REFERENCES
         departments (department id));
```

Violating Constraints

```
UPDATE employees
SET department_id = 55
WHERE department_id = 110;
```

```
UPDATE employees
    *
ERROR at line 1:
ORA-02291: integrity constraint (HR.EMP_DEPT_FK)
violated - parent key not found
```

Department 55 does not exist.

Violating Constraints

 You cannot delete a row that contains a primary key that is used as a foreign key in

```
DELETE FROM departments
WHERE department_id = 60;
```

```
DELETE FROM departments

*

ERROR at line 1:

ORA-02292: integrity constraint (HR.EMP_DEPT_FK)

violated - child record found
```

Creating a Table by Using a Subquery

 Create a table and insert rows by combining the CREATE TABLE statement and the AS subquery option.

```
CREATE TABLE table
[(column, column...)]
AS subquery;
```

- Match the number of specified columns to the number of subquery columns.
- Define columns with column names and default values.

Creating a Table by Using a Subquery

DESCRIBE dept80

Name	Null?	Туре
EMPLOYEE_ID		NUMBER(6)
LAST_NAME	NOT NULL	VARCHAR2(25)
ANNSAL		NUMBER
HIRE_DATE	NOT NULL	DATE

ALTER TABLE Statement

- Use the ALTER TABLE statement to:
 - Add a new column
 - Modify an existing column
 - Define a default value for the new column
 - Drop a column

Dropping a Table

- All data and structure in the table are deleted.
- Any pending transactions are committed.
- All indexes are dropped.
- All constraints are dropped.
- You cannot roll back the DROP TABLE statement.

```
DROP TABLE dept80;

Table dropped.
```

Summary

- In this lesson, you should have learned how to use the CREATE TABLE statement to create a table and include constraints.
 - Categorize the main database objects
 - Review the table structure
 - List the data types that are available for columns
 - Create a simple table
 - Understand how constraints are created at the time of table creation
 - Describe how schema objects work
